

SMART INDIA HACKATHON 2026

TITLE PAGE

- **Problem Statement ID** – SIH26044
- **Problem Statement Title** – Portal for Academia-Industry collaboration for Skill Mapping, Internships and Placement
- **Theme** – Education & Skill Development
- **PS Category** – Software
- **Team ID** – 118701
- **Team Name** – Disruptors VI
- **Product** – SkillBridge — Career Intelligence Platform

IDEA TITLE

SkillBridge — Career Intelligence Platform

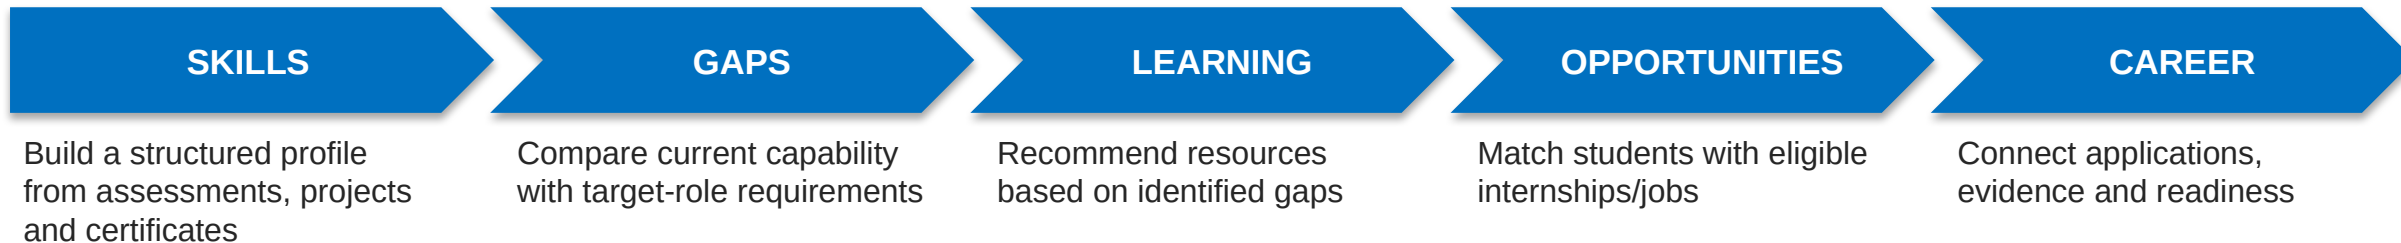

Proposed Solution

- Skill assessment and evidence-backed skill profiles
- Skill-gap analysis against target roles
- Targeted learning recommendations
- Internship and job opportunity matching
- Explainable match results showing aligned and missing skills
- Faculty and institution skill-demand insights

How It Addresses the Problem

SkillBridge connects fragmented stages of student development and placement into one continuous workflow — from skill assessment and gap identification to learning, opportunities and applications.

Innovation & Uniqueness

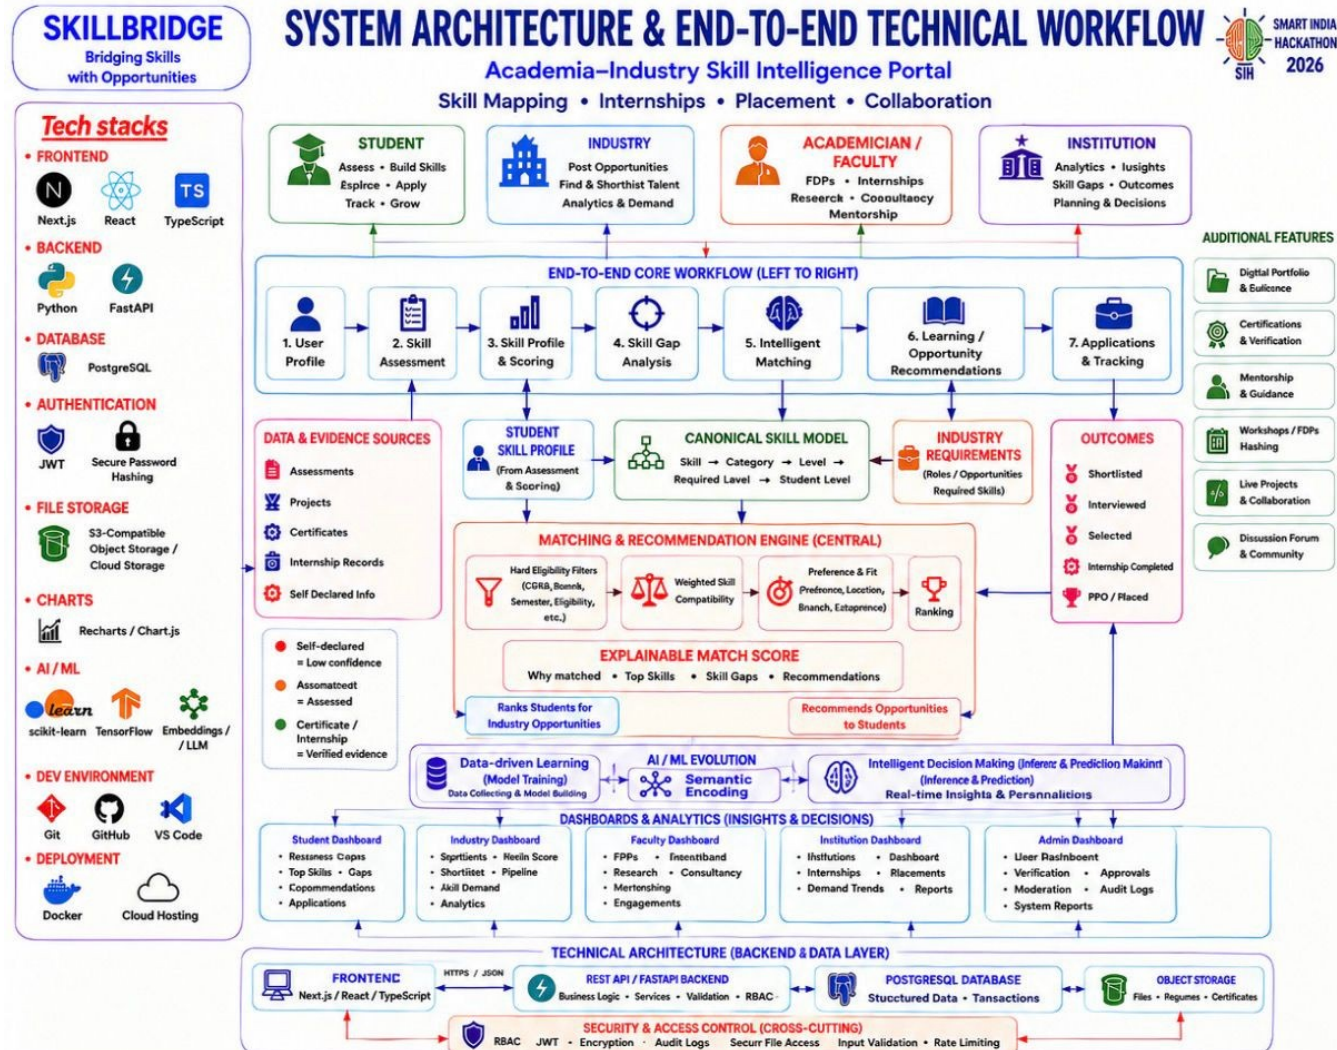

Explainable matching — shows aligned skills, missing skills and recommended action.

Live Prototype: <https://skill-bridge-sih-26044-six.vercel.app/>

TECHNICAL APPROACH

Current prototype

- Evidence-backed skill profiles
- Deterministic, explainable matching
- Hard eligibility → weighted skill compatibility → bounded preference fit
- Seeded demonstration data

Future evolution

- The AI / ML layer shown in the diagram is a planned evolution path.
- It is not part of the current matching engine.

Feasibility

- Digital career, learning and employment platforms demonstrate strong demand for structured career support.
- Student development, skill-building and placement activities are often fragmented across different stages.
- SkillBridge connects skill development, learning and opportunity discovery in one workflow.
- The modular architecture allows the platform to evolve with additional integrations and capabilities.

Strategic Plan planned extensions, not yet implemented

Extend institutional integrations

Expand the learning-resource ecosystem

Add stronger verification and audit capabilities

Support broader academia-industry collaboration

Risks & Mitigation

Risk	Mitigation (current prototype)
Data privacy	• JWT-based authentication • Role-based access control • Restricted access to protected resources
Profile reliability	• Structured profile and evidence model • Validation of submitted information
Matching reliability	• Deterministic and explainable matching • Explicit eligibility and skill-compatibility logic
Scalability	• Modular frontend/backend architecture • PostgreSQL-based structured data model

IMPACT AND BENEFITS

Students

- Understand current skill strengths and gaps
- Identify what to improve for target roles
- Receive targeted learning recommendations
- Discover relevant internship and job opportunities
- Track applications and career readiness

Industry

- Discover candidates based on relevant skills
- View explainable skill compatibility
- Identify aligned and missing capabilities
- Support structured candidate screening

Faculty

- View cohort-level skill intelligence
- Identify common skill gaps
- Understand learning and training demand
- Support student mentoring and development

Institutions

- Monitor skill-development trends
- Identify institutional skill gaps
- Understand industry-aligned demand
- Support curriculum and placement decisions

Systemic / Educational Impact

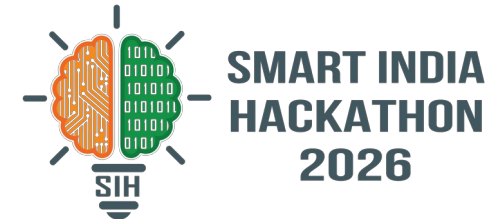

Stronger academia-industry alignment

More structured skill development

Better visibility into skill gaps

Data-informed curriculum and training decisions
